

01. At a Glance

We develop small hydro power plants, which are capable of generating quick and sustainably clean electrical energy in harmony with nature.

OECD: Energy supply will soon be no longer safe

OECD forecast: Global energy demand increases by a third by 2035.
Oil becomes dramatically more expensive, climate goals are unattainable.
The Earth will continue to warm.

Smart power generation

Climate friendly

Renewable energies are required to reduce the emissions of harmful substances.

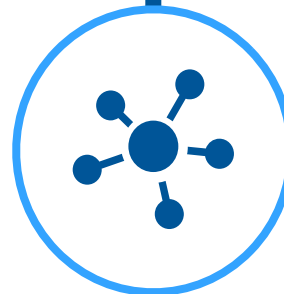

Decentralize

Energy needs to be generated where it is needed, so that transfer and storage losses are significantly reduced.

Perpetual

Energy must be available 24 hours a day and be independent of weather conditions.

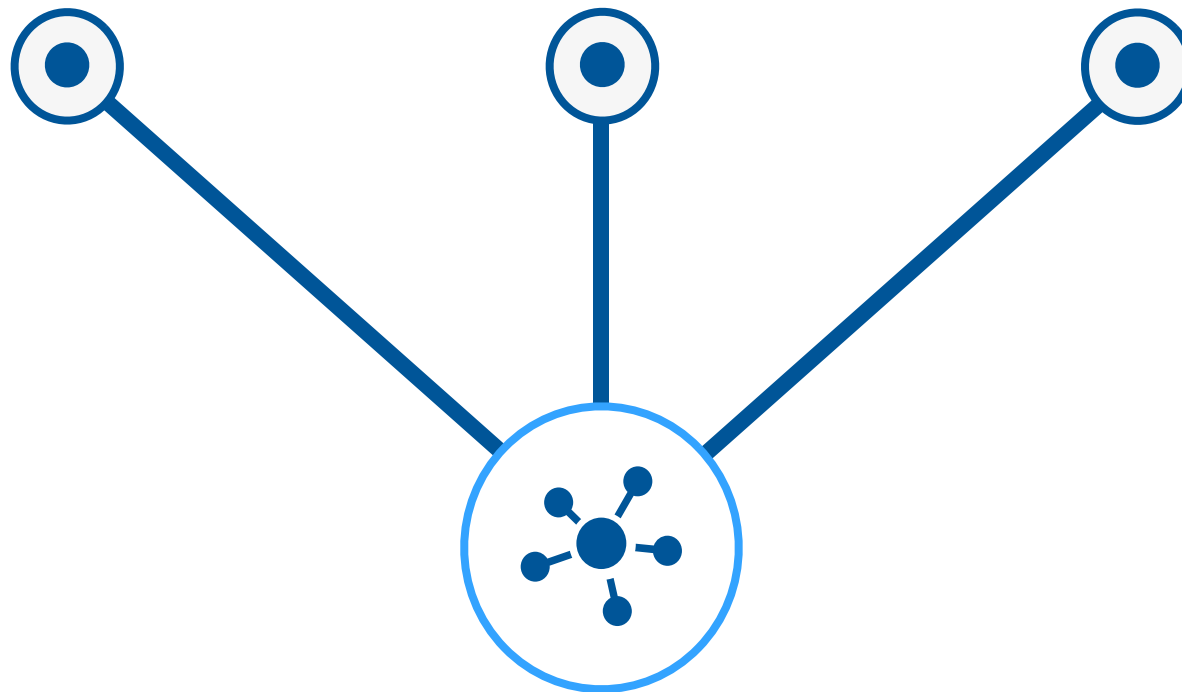

Smart energy from the small hydropower stations from Aquakin

Protects plants and animals

Renewable Energy on the spot

Weather independent and baseload capable

Blue Freedom Portable

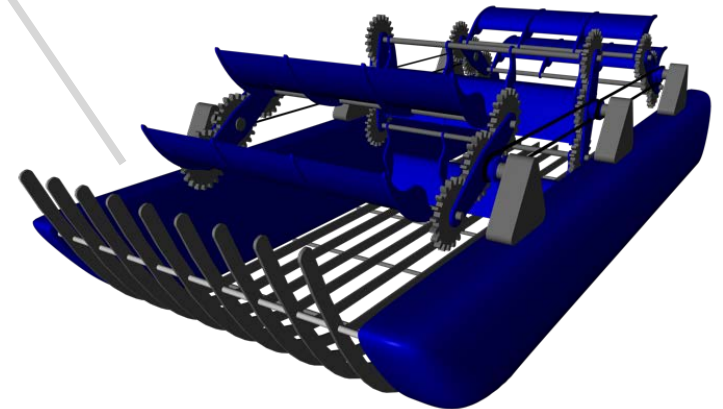

Power plant for the backpack.

The diameter of 20 centimeters makes it smallest and lightest hydroelectric plant in the world

Blue Freedom Kinetic

Millwheel. Reinvented.

Power generation in slow-moving and shallow water, supplemented by the function of a fish ladder

Blue Freedom Tube

Electricity generated with tap water.
Electricity generated within water pipes
while retaining food safety.

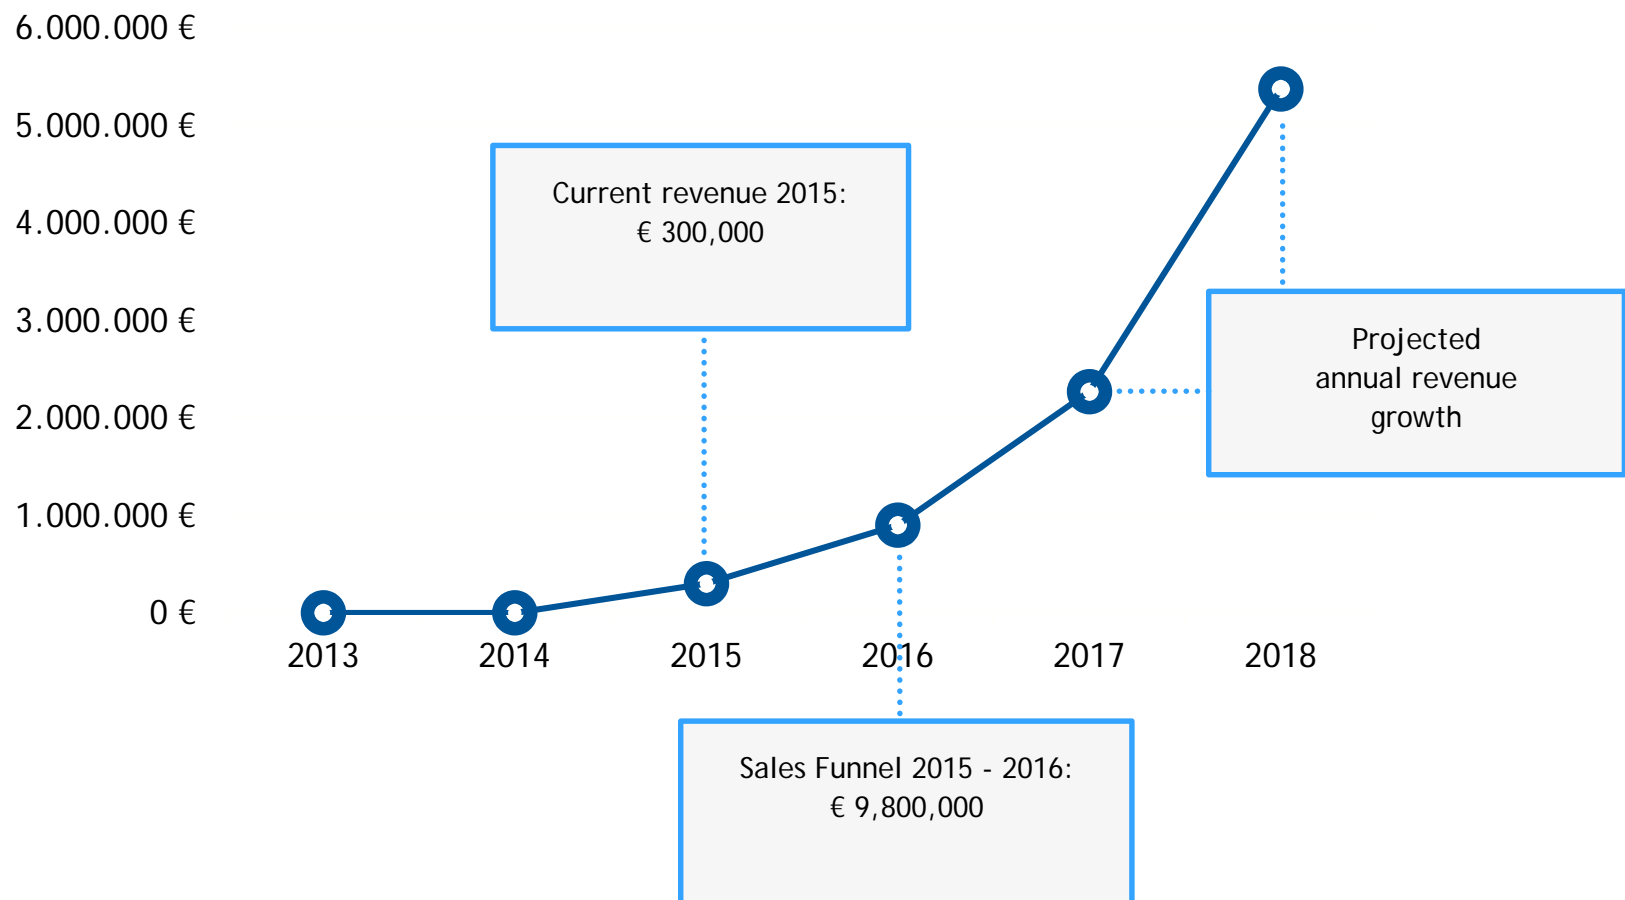

Blue Freedom Vortex

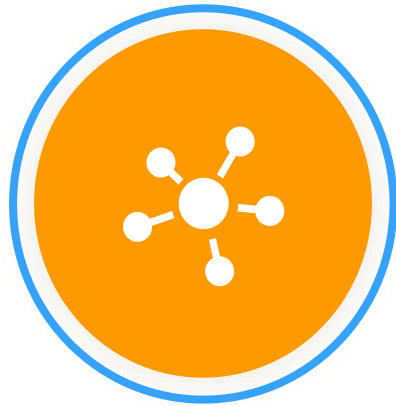

Tornado. For the benefit of people.
Electricity generated in the mountains
by a waterfall or a river inlet.

Current demand from over 60 countries

Introduced in 2015, Blue Freedom Portable achieved sales of € 300,000 and demand for our other products has reached € 9.8 million.

€1.6M

Product development costs

To accelerate the development of our power plants we need more specialist, experts and additional technical equipment.

Production process safety

In-house certain processes in order to increase our production rate and increase our quality.

Sales & Customer Service

In order to fully process the large number of inquiries from potential customers software solutions are needed for the automation of customer relationship management.

of the original in German.

“We need more people who successfully transform their ideas into a product. Mr. Schröder and Mr. Padberg set a first milestone to provide people that have water in the vicinity irrespective of the weather and time of day access to electrical energy. [...] Energy everywhere - Blue Freedom provides a pragmatic solution for decentralized power supply.”
