

## Canatu: Going Places

Ecosummit London 2015  
Mikko Kärkkäinen, CFO

# Canatu moved from LAB to FAB in 2015

---

- Canatu is a manufacturer of transparent conductive films for flat, flexible and formable touch displays and touch sensitive surfaces
- We have over ten years of know-how of Carbon NanoBud<sup>®</sup> material technology. Now the material is fully commercialised and we are moving into products

## Milestones:

---

- 2010 – from university to own production plant
- 2013 – touch sensor manufacturing started
- 2014 – roll-to-roll coating line started
  - ISO 9001-2008 Certification achieved
- 2015 – First customer win in Automotive
  - Volume production started in July
  - First Flexible touch sensor product won

# Current orders deploy full capacity in three shifts

---

- One customer project running in high volume
- Two products ramping-up for external launch Q1/2016 and require several sample runs already
- Products in the pipeline will generate over 8 M Euros revenue in 2016

# New customers want to go into production with Canatu

---

- Automotive projects for 2017/18 models with all major European auto manufacturers
  - Canatu is the only 3D formable material to meet the optical requirements of the car industry
- Mobile/tablet projects with 5 out of world's top 10 OEM brands
  - Canatu's extremely flexible material offers a long awaited solution for flexible and foldable designs in consumer electronics
- We are entering long term JDAs with major brands to develop Canatu into new areas beyond touch

Thank You!
